WHO'S READING YOUR EMAILS?

SoftClan e-cryptor

Finally! A powerful yet easy-to-use security program for encrypting e-mails and files/folders. SoftClan e-cryptor uses self-decrypting technology and is perfect for both individuals and businesses to protect your information and privacy.

As Microsoft says, sending an un-encrypted e-mail is like shouting in a crowded room! Yet most of the time, nothing is being done to protect sensitive information. Just imagine what details are in your e-mails and files – credit card and bank information, social security number, contracts, bids, personal correspondence, confidential company information – all which can be used against you. This is why we created SoftClan e-cryptor. The product is unique in that it offers you both powerful protection as well as ease-of-use. Encrypted files are self-decrypting! Your encrypted e-mail recipients need nothing to decrypt the file except the password. E-cryptor is also perfect for encrypting files and folders because you never have to worry about having the software installed to decrypt them. This is particularly helpful if you want to encrypt files – including backup files – on removable media. You can decrypt them on any system, even a system that doesn't have e-cryptor installed.

SOFTCLAN E-CRYPTOR

Some Features and Benefits of e-cryptor include:

- ✍ Recipients need nothing for decrypting the information, but the encrypted envelope they receive, the password, and maybe an unzip program.
- ✍ Encrypted envelopes, as in standard e-mail messages, can contain both: file attachments and a Rich Text message. Once received, recipients can directly open or save the attachments to any location, and read the text message in the built-in text viewer.
- ✍ Complex and robust encryption scheme, using the **Advanced Encryption Standard (AES)**.
- ✍ New **Sender's Authentication ID (SAID)** to help recipients make sure that all encrypted envelopes they receive did indeed originate from the alleged senders.
- ✍ Fast and strong integrity checking using the **RSA MD5** algorithm to guarantee the encrypted envelope and its contents are exactly the same as they were before encrypted and sent, and have not been altered in any way during transit.
- ✍ Easy-to-use yet powerful and sophisticated enough to satisfy the needs of the most demanding users.

Purchasing Information:

MSRP: €79,95 inc. VAT
\$69.95 (USA)

Product ID: EC15-CS

UPC: 664072000469
